WarkaWaterInc is a registered nonprofit focused on innovative, and truly sustainable solutions, to some of humanity’s enduring issues.

Warka Water (WW) mission is to provide clean water, sanitation, and housing to the people in need, by building infrastructure and facilities, providing technical training for construction, operation, and maintenance, and creating educational programs for sanitary and hygiene practices. We are developing sustainable solutions that will empower individuals for generations to come. Beyond potable water, we aim to empower the local ethnic groups and restore the natural ecosystem. To bring a positive impact on the community by invigorating the local economy and providing women and children opportunities to invest their time in care, education, and other cultural and productive activities. Our Action meets the framework of the Sustainable Development Goals and it is addressed the implementation of some of the 17 global challenges. In 2015 the first Warka Tower pilot has been constructed in Dorze, a rural community in south Ethiopia. After this successful initiative, we have founded the “Warka Water Inc.” non-profit, based in the USA, as a platform for our social actions. With the experience acquired working with rural communities, we realized that above the water scarcity there were other important issues we could help with. This is why additional projects have been developed, for integrated and sustainable aid. Currently, we are active in Cameroon where we are constructing the Warka Village. We are also undertaking the first steps to bring help to some rural isolated communities in Haiti, Togo. Philosophy: Innovative, eco-friendly, biodegradable infrastructures, to support the basic needs of disadvantaged populations located in remote rural locations. Truly sustainable projects through the fusion of local traditional knowledge, and cutting-edge technologies. Involvement of the human local resources in all the stages of the project. Inspired by nature, visionary design solutions are created involving the human local resources in all the stages of the project. Understanding, respecting and implementing the “Genius loci”, the spirit of a place. (from: <https://warkawater.org>)
